BLUE LINE

TECHNOLOGY

Blue Line Technology introduces FIRST LINE Facial Recognition,

a camera-based system developed by veterans of law enforcement.

FIRST LINE is a state-of-the art-facial recognition technology for threat detection, access control and concierge applications with a robust service distribution across many industries.

Easy-to-Use Interface *allows the user to add, store and edit data both directly on the unit and through a seamless web interface.*

Prevention and Immediate Detection *of both external and internal threats*

Access Control *for any secured areas in which easy access or greater control are desired*

Concierge Service *capabilities offer greeting and rewards programs for specific customers*

HOW IT WORKS

User creates a database custom-designed for their own specific needs. *FIRST LINE* Facial Recognition monitors, detects and alerts the user when a threat or unknown subject's face is captured by the system.

FEATURES

FACE IDENTIFICATION can be separated into three distinct categories: known, unknown and alert.

EMAIL NOTIFICATION displays camera location, name, notes and photos of the alert.

MONITOR ALERTS allow for playback video feature and detailed person information with a single click.

Workplace violence is on the rise and business leaders are taking notice.
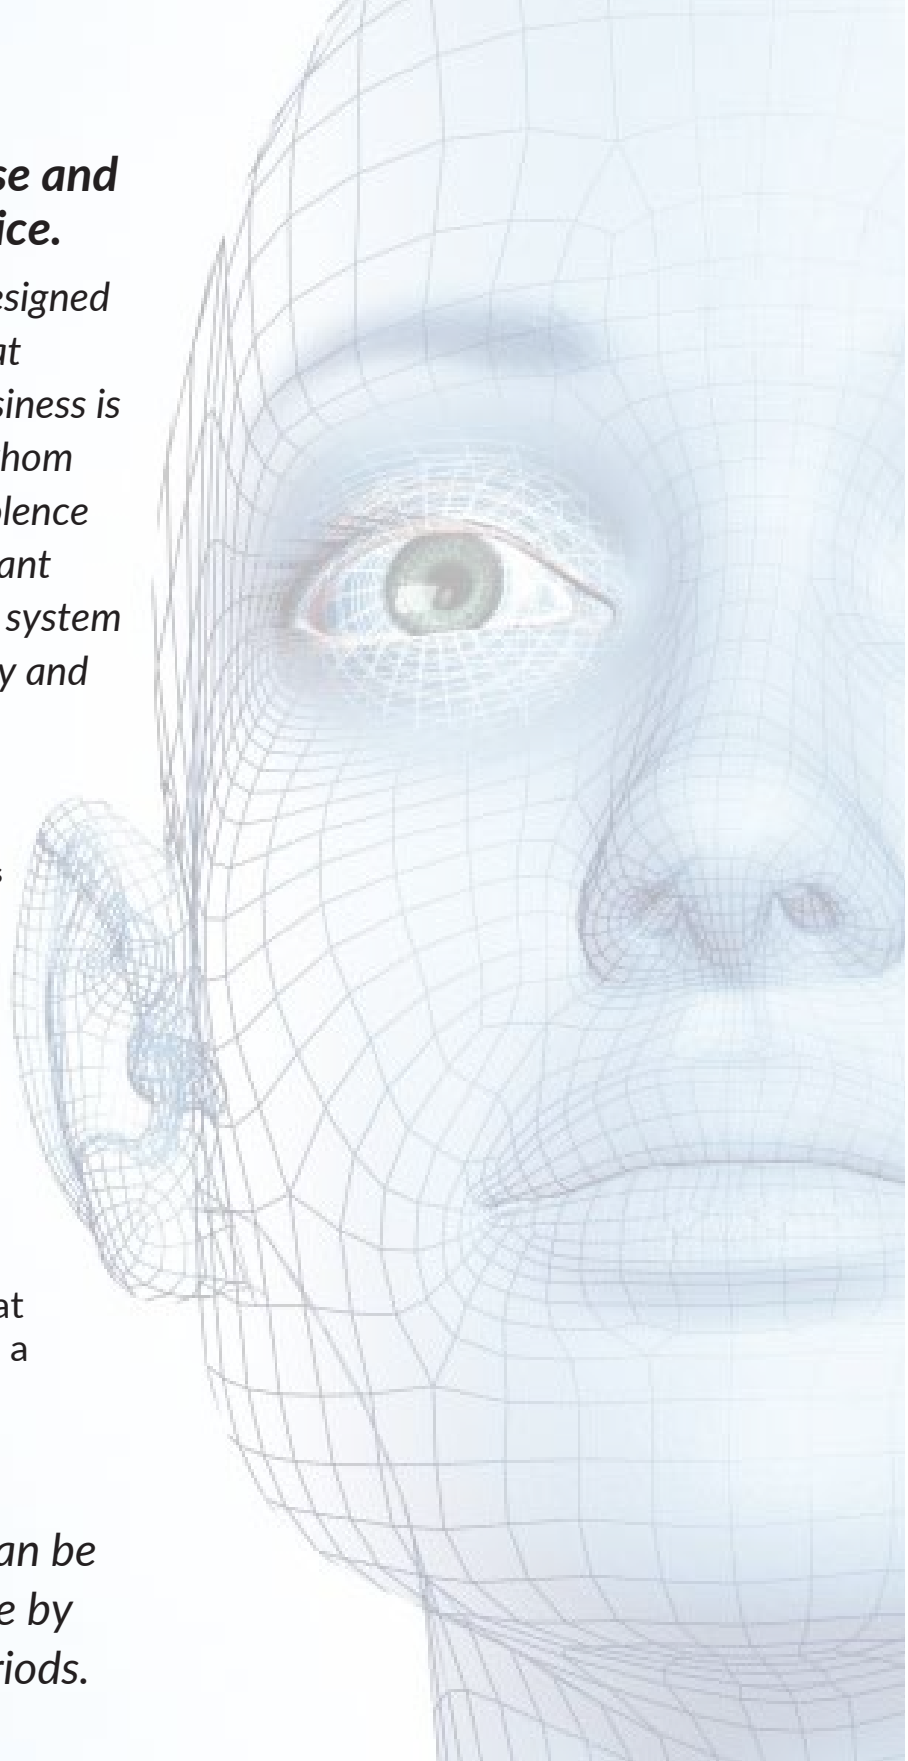

FIRST LINE Facial Recognition is designed to be a Human Resources tool in threat detection and prevention. When a business is aware of a disgruntled ex-employee whom they fear retaliation, or a domestic violence situation where an employee's significant other poses an immediate danger, our system will detect the encroacher immediately and lock them out of the building.

BENEFITS TO CORPORATIONS

- **Eliminates need for key-cards with access control functionality**
- **Creates a safer security environment**
- **Can be installed within 48 hours to neutralize potential threats**
- **System is portable**
- **Highly accurate and highly reliable**
- **User controlled database**
- **Records live camera feed**

The user will receive an email if a threat is detected or if anyone tries to access a secured area whose face is "unknown" to the system.

FIRST LINE Facial Recognition can be rented for a specific period of time by HR directors during high-alert periods.
