

Parallel Biometrics - Adding 2-factor capabilities without major integration change

In a market loaded with access control products, companies are playing catch up to add new solutions for a growing legacy issue. How do you add 2-factor capabilities to the system without major integration changes? It is difficult to navigate through the decision of access control suppliers for readers that integrate into their system for visitor management, employee attendance, and door access. The logical choice is biometrics.

Blue Line's design is simple. The second factor is added in parallel eliminating the need to change existing readers. If you have a legacy issue and your system becomes inoperative, you can switch to a single factor biometrics and continue business as usual. Designed to enhance legacy card and fob access as well as new construction.

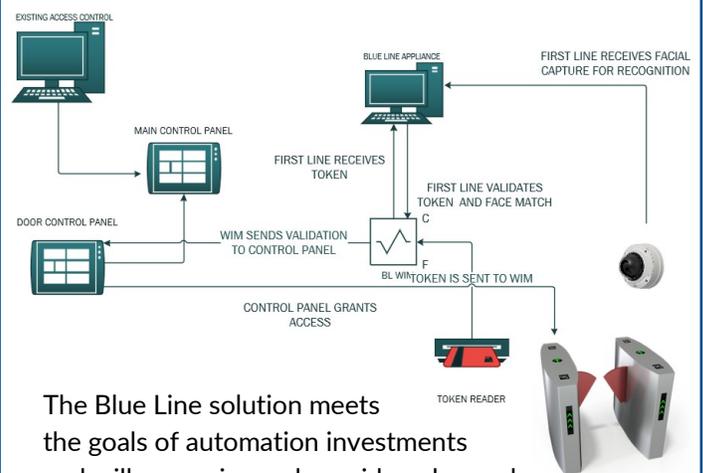

“Poor Management of Security Badges Leaves Buildings Vulnerable to Catastrophic Incidents”
- United States Inspector General Report

Enhanced traditional access control

- Combat the cloning devices that make card copy easy
- Stop employees from passing cards
- Address 36% of security breaches from inside
- Seamless, frictionless employee experience
- Interfaces with existing wiegand ac platforms
- Provides 2FA matching existing credential to face
- Single-factor capabilities with face or card
- Threat detection as a standard
- Alert notification as a standard
- Provide "time" to take action
- Adaptable to multiple applications/environment

Automated Patented software

The Blue Line solution meets the goals of automation investments and will recognize and provide enhanced capability to address a threat. The solution operates without human attention and will reduce the overall cost of security with enhanced productivity of the existing safety team.

Benefits of the Blue Line Solution

- Patented software made in the USA
- Faster and more accurate facial recognition
- State-of-the-art biometric ID verification
- Prevents access with stolen, or duplicated cards
- Second-tier security for controlled rooms
- Threat detection
- Alert capabilities
- Interface with existing security infrastructure
- Validate access control of employees and visitors
- Verify time and attendance
- Avoid the current system rip and replace costs
- Improve the productivity of guards
- Increase protection against workplace violence

Why is this the best biometric?

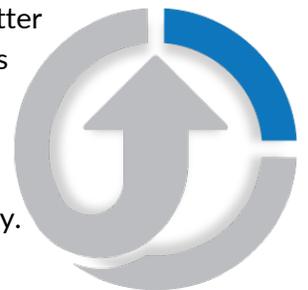

- Hands free, hygienic friendly solution
- HD digital video record of events
- Unauthorized personnel tracking
- Immediate notification
- "Alerts" provide prevention protocol

Application Development

Corporate Buildings
Government Buildings
Utility Sub Stations
Manufacturing Plants
Hospitals
Banks
Data Rooms
Equipment Rooms
Pharma Rooms

Immediate Security Enhancements

Upgrade your access control and add threat-detection alerts simultaneously with a system that is easily tailored and layered to your specific needs. It is better to interface with all systems than integrate with a few. The solution retrofits with existing access control to reach a new level of security.
