BLUE LINE
TECHNOLOGY

Blue Line Technology introduces
FIRST LINE Facial Recognition

A camera-based system developed by veterans of law enforcement.

Easy-to-Use Interface *allows the user to add, store and edit data both directly on the unit and through a seamless web interface.*

Prevention and Immediate Detection *of both external and internal threats*

Access Control *for any secured areas in which greater control is desired*

Concierge Service *capabilities offer greeting and rewards programs for specific customers*

FIRST LINE is a state-of-the art-facial recognition technology for threat detection, access control and concierge applications with a robust service distribution across many industries.

HOW IT WORKS

User creates a database custom-designed for their own specific needs. *FIRST LINE* Facial Recognition monitors, detects and alerts the user when a threat or unknown subject's face is captured by the system.

FEATURES

FACE IDENTIFICATION can be separated into three distinct categories: known, unknown and alert.

EMAIL NOTIFICATION displays camera location, name, notes and photos of the alert.

MONITOR ALERTS allow for playback video feature and detailed person information with a single click.

DEA, FDA and OSHA compliance fines for facilities manufacturing or housing pharmaceuticals can be substantial. There have been documented fines for organizations that have failed to meet these compliance standards ranging from $2.2 Million to $80 Million. *FIRST LINE* Facial Recognition can identify, validate and authenticate the countless individuals involved through the life cycle of the controlled substances. Additionally, *FIRST LINE* Facial Recognition will improve security around specific access and distribution points.

BENEFITS

- **Unauthorized personnel are detected and denied access to controlled area**
- **Can greatly reduce risk of DEA, FDA and OSHA compliance fines**
- **Highly accurate and highly reliable**
- **Blue Line Technology database can interface with existing software**
- **Seamless integration with current security infrastructure**
- **Improved verification and authentication of visitors**

FIRST LINE Facial Recognition houses a database that provides a compliance-friendly reporting tracking system which verifies time and attendance. Specific areas where facial recognition will greatly reduce risk of compliance fines include shipping and receiving, R&D, drug vaults, product inspection and packing.
